Claim 2; Fig 1; 93pp; English

The sequence represents a cDNA which encodes the human caspase recruitment domain 12 (CARD-12) polypeptide. CARD domains are found in a number of proteins that transmit signals that activate apoptosis and inflammatory pathways in response to stress and other stimuli. Therefore CARD-12 and its corresponding nucleic acid may be used in treatment and diagnosis of patients suffering from disorders associated with an abnormal level (an increase or a decrease) of apoptotic cell death or abnormal activity of stress-related pathways. The disorders include cancer, viral infections (e.g. caused by poxviruses, adenoviruses), autoimmune disorders (e.g. systemic lupus erythematosis, arthritis), neurological disorders (e.g. Alzheimer's disease, amountophic lateral infarction, stroke), inflamm Crohn's disease, insulin-dep psoriasis, graft rejection), sclerosis), haematologic diseases (e.g. aplastic anaemia, myocardial stroke), inflammatory and immune system disorders (e.g. ease, insulin-dependent diabetes, contact dermatitis, graft rejection), bacterial infections (e.g. tuberculosis leprosy), Therefore, Ø

These were derived from expressed sequence tags from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is

                                                                                                                                                                                                                                                                                                                                                cancer, viral infections (e.g. caused by poxviruses, adenoviruses), neurological disorders (e.g. systemic lupus erythematosis, arthritis), neurological disorders (e.g. Alzheimer's disease, amyotrophic lateral sclerosis), haematologic diseases (e.g. aplastic anaemia, myocardial infarction, stroke), inflammatory and immune system disorders (e.g. Crohn's disease, insulin-dependent diabetes, contact dermatitis, psoriasis, graft rejection), bacterial infections (e.g. tuberculosis, lepromatous leprosy), ischaemic and hypoxic brain injury, kidney ischaemia/reperfusion injury, excitotoxic brain damage, acute bacteris meningitis and liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence represents a genomic DNA which encodes the human caspase recruitment domain 12 (CARD-12) polypeptide. CARD domains are found in number of proteins that transmit signals that activate apoptosis and inflammatory pathways in response to stress and other stimuli. Therefore CARD-12 and its corresponding nucleic acid may be used in treatment and diagnosis of patients suffering from disorders associated with an abnormal level (an increase or a decrease) of apoptotic cell death or abnormal activity of stress-related pathways. The disorders include
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         systemic lupus erythematosis; arthritis; neurological disorder; stroke; Alzheimer's disease; amyotrophic lateral sclerosis; haematologic disease; aplastic anaemia; myocardial infarction; inflammatory disorder; crohn's disease; insulin-dependent diabetes; contact dermatitis; psoriasis; graft rejection; bacterial infection; lepromatous leprosy; tuberculosis; ischaemic brain injury; hypoxic brain injury; ds; kidney ischaemia; reperfusion injury; acute bacterial meningitis; excitotoxic brain damage; liver disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure;

The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, hematopoietic disorders, and the state of the sease

For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the

The colo cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2527
                                                     The invention relates to an excessive ovulation animal, which is a transgenic animal with a totipotent cell containing a DNA fragment containing a promoter sequence and a gonadotropic hormone coding sequence. The DNA fragment is in the somatic cell chromosome. The excessive ovulation animal is useful for improving the productivity animals. The method can improve the productivity of a useful animal
                                                                                                                                                                                                          This sequence encodes a gonadotropic hormone The invention relates to an excessive ovulation

by hybridomas, prepared by fusing antibody-producing cells of mammals immunized with an immunogen containing residues 256-586 or 841-1052 of a 1403 residue amino acid sequence, fully defined in the specification, or their partial sequence, with a myeloma cell line. The monoclonal antibodies are for the study of apoptosis disease onset mechanism, disease diagnosis and development of drugs to prevent and treat apoptosis-related diseases. The quantitation method with the monoclonal antibodies is simple and accurate by using a biological specimen. This sequence encodes the human apoptosis inhibitory protein NAIP which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                              Simple and accurate quantitation of human apoptosis inhibitory protein (NAIP) with monoclonal antibodies, for disease diagnosis and development of drugs to prevent and treat apoptosis related diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NAIP; apoptosis inhibiting protein; monoclonal antibody; diagnosis; apoptosis disease onset mechanism; drugs development; prevention; treatment; human; ss.

It was isolated from a human foetal spinal cord cDNA library by probing with the genomic insert in cosmid 25086, containing a CATT locus, and completion of gaps in the sequence by further library screenings. The NAIP gene, on chromosome 513.1, is about 56 kb long and has 18 exons (see also AAT71266). NAIP is a negative regulator of apoptosis, partic. neuronal apoptosis and, when deficient or absent, contributes to neurodegenerative phenotypes such as spinal muscular atrophy (SMA) and amyotrophic lateral sclerosis. NAIP nucleic acids are useful for protein expression in host-vector systems, as probes/primers, and in gene therapy to inhibit apoptosis for treatment of AIDS, neurodegenerative disease, myelodysplastic syndromes or ischaemic injury, or (antisense) to increase apoptosis.

The NAIP DNA sequence including exon 14a (see also AAT71265 and AAT71265) appears to be a predominant gene isoform which is not deleted or mutated in spinal muscular atrophy (SMA) patients. The NAIP gene was mapped to 5q13.1. NAIP (see also AAW20032 and AAW20033) is a negative regulator of apoptosis, partic. neuronal apoptosis and, when deficient or absent, contributes to neurodegenerative phenotypes such as SMA and amyotrophic lateral sclerosis. NAIP nucleic acids are useful for protein expression in host-vector systems, as probes/primers, and in gene therapy to inhibit apoptosis for treatment of AIDS, neurodegenerative disease, a myelodysplastic syndrome or ischaemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (AAT71264) was isolated from a human foetal spinal cord cDNA library by probing with the genomic insert in cosmid 25086, containing a CATT locus. An additional coding sequence (AAT71263), lacking exon 14a, was also obtd. The NAIP DNA sequence including exon 14a exon 14a.

It was isolated from a human foetal spinal cord cDNA library by probing with the genomic insert in cosmid 25086, containing a CATT locus, and completion of gaps in the sequence by further library screenings. The NAIP gene, on the sequence by further library screenings. The NAIP gene, on chromosome 5q13.1, is about 56 kb long. NAIP is a negative regulator of apoptosis, partic neuronal apoptosis and, when deficient or absent, contributes to neurodegenerative phenotypes such as spinal muscular atrophy (SMA) and amyotrophic lateral cuseful for protein expression in host-vector systems, as probes or primers, and in gene therapy to inhibit apoptosis for treatment of AIDS, neurodegenerative disease, myelodysplastic syndromes or ischaemic injury, or (antisense) to increase apoptosis.
                                                                                                                                                                                                                                                 Align seg 1/1 to: AAT71266

    This sequence encodes a gonadotropic hormone. The invention relates to an excessive ovulation animal, which is a transgenic animal with a totipotent cell containing a DNA fragment containing a promoter sequence and a gonadotropic hormone coding sequence. The DNA fragment is in the somatic cell chromosome. The

The apoptosis inhibitory protein is useful for the elucidation of the mechanism of various apoptosis diseases such as human spinal muscular atrophy and the diagnosis, the prevention and the treatme of such diseases.

                This sequence represents the cDNA sequence for the human neuronal apoptosis inhibitor protein (NAIP). This sequence was found on a region of the human chromosome 5q13. This sequence was isolated from a yeast artificial chromosome 5q13. This sequence was isolated from a yeast artificial chromosome (YAC) contig containing the D58435-D58112 interval of the chromosome 5q13. Mutations in this gene, are causative of spinal muscular atrophy (SMA) types I, II, and III. SMAs are a group of autosomal recessive, neurodegenerative disorders. SMAs are classified into the three types based upon the age of onset (with type I being the severest form with the earliest age of onset). All three types are characterised by the degeneration of the alpha motor neurons of the spinal cord manifesting as weakness and wasting of the proximal voluntary muscles. The most common mutations of this sequence are thought to be deletions of exons 5 and 6, and reductions in the copy number of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4305
